

**4 MILLION
STEPS AHEAD**

THE INTELLIGENT COUPLING.

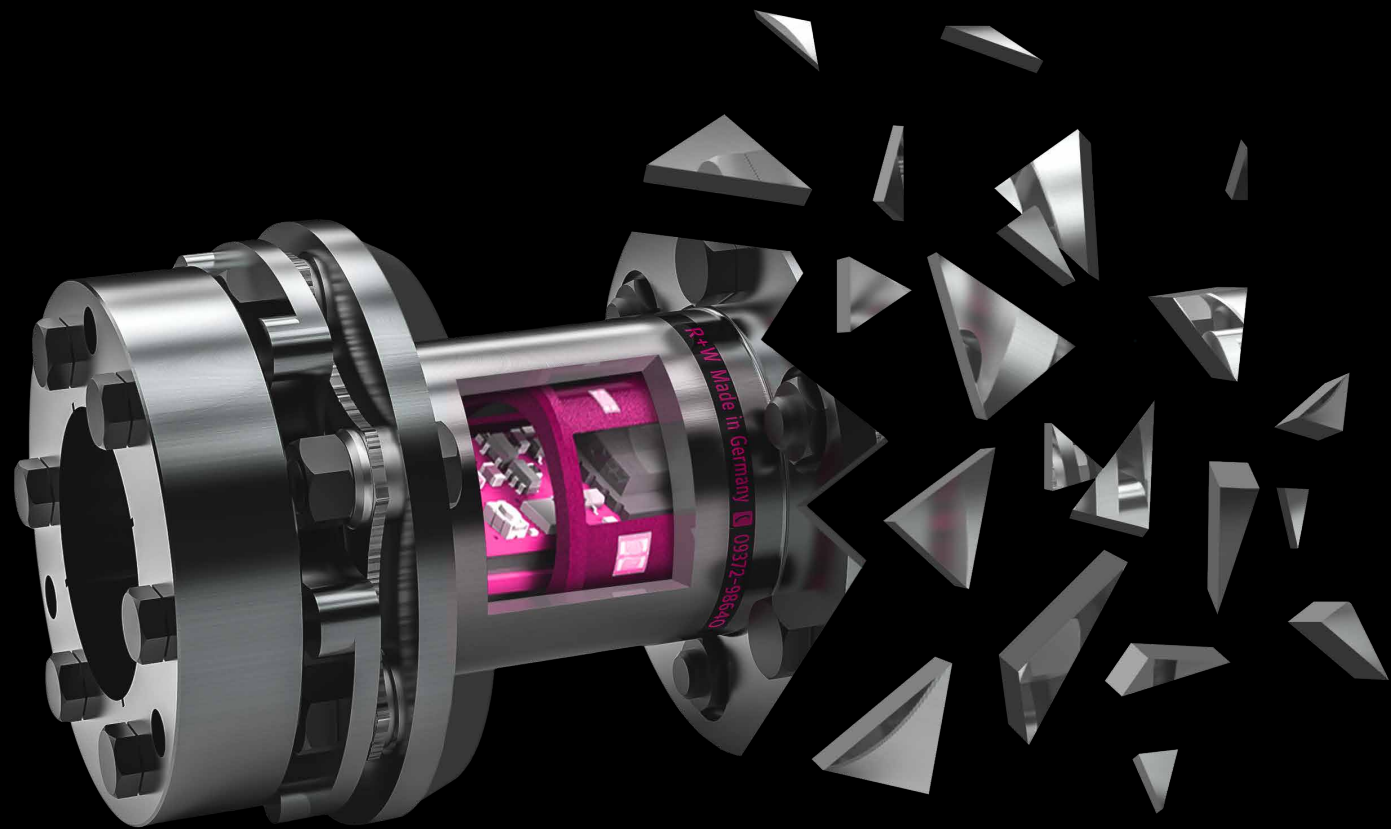

THE FUTURE – YOU CAN COUNT ON.

01 **CLARITY WHERE YOU NEED IT**
Measurement data recorded directly in the drivetrain.

02 **HIGH-PRECISION MEASUREMENTS**
Torque, speed, acceleration, rotation and spatial position.

03 **COMPREHENSIVE DATA**
A range of scalable diagram types track the detailed history of measured quantities.

04 **TIME-DEPENDENT MEASURED QUANTITIES THAT CAN BE AGGREGATED**
Improved evaluation and understanding of dynamic behaviour in the rotating drivetrain.

Measurement data directly from the drivetrain – transmitted in real time to stationary and mobile dashboards – and even for systems already in use. The new R+W coupling sensor systems are as smart as they are innovative, giving you an overview of all dynamic parameters and data needed to ensure uninterrupted plant availability at all times. In a nutshell: a future-proof way to embed the future.
